

Executive Summary

- Analysed 3,662 Nykaa beauty products end-to-end.
- Built using Python, SQLite and Power BI.
- Examined pricing, merchandising and customer engagement.
- Identified four actionable merchandising insights.

Key Business Findings

1 Discount Trap - Several brands discount 20–31%, well above the 18.8% average. - Their ratings still trail the platform's better-performing brands. BUSINESS IMPACT Discounting alone isn't resolving a satisfaction gap. ✓ Audit product quality before extending discount terms.	2 Merchandising Audit - FEATURED / BESTSELLER items draw far more reviews than untagged ones. - Their ratings are only marginally higher, not proportionally so. BUSINESS IMPACT Tag criteria may reward visibility over quality. ✓ Re-validate tag criteria against current engagement.	3 Visibility Bias - Page-1 listings get ~11,200 avg. reviews vs ~4–5K on pages 4–9. - Ratings stay consistent regardless of listing page position. BUSINESS IMPACT Attention follows placement, not just quality. ✓ Rotate strong products from later pages to early slots.	4 Inventory Attention Gap 15 premium products (₹2,400+) show fewer than 20 reviews each. - High price has not translated into customer engagement. BUSINESS IMPACT Capital may sit in low-traction premium stock. ✓ Target these SKUs with campaigns or markdowns.
